Education

National Institute of Textile Engineering and Research (NITER), B.Sc. in Computer Science and Engineering – Dhaka, Bangladesh — Nov 2022 – July 2027

- CGPA: 3.33 / 4.00
- Core Coursework: Data Structures & Algorithms, Operating Systems, Database Systems, Computer Networks, Object-Oriented Programming

Skills

Programming Languages: Python, Rust, JavaScript, TypeScript, Dart, C, C++, SQL, Bash

Backend & Infrastructure: Node.js, Express.js, REST APIs, MySQL, MongoDB, Docker, Linux CLI

Frontend & Mobile: React, Tailwind CSS, Flutter, Astro, Vite

Tools & Automation: Git, GitHub Actions, Docker Compose, Web Scraping, RFC 5545 Sync Engines, Automation

Projects

Academic Routine Engine — Oct 2026

Rust, Tokio, Teloxide, RFC 5545 | Autonomous asynchronous timetable engine and Telegram assistant.

- Architected an event-driven scheduler in Rust leveraging Tokio and Teloxide, processing concurrent timetable queries.
- Engineered an RFC 5545-compliant iCalendar (.ics) parser and synchronization pipeline to resolve course overlaps and automate routine notifications.
- Applied zero-cost release profiling (Link-Time Optimization, panic=abort, binary stripping), minimizing binary footprint and ensuring sub-second cold starts.

MediFlow Platform — E-Commerce Backend — Feb 2025 – Aug 2026

Express.js, MySQL, Docker Compose, React | Full-stack medical equipment platform with modular REST APIs.

- Engineered modular RESTful backend services using Express 5 and connection-pooled MySQL for catalog and order management.
- Implemented security middleware including JWT session authentication, bcrypt password hashing, input validation, and IP rate limiting.
- Containerized client, server, and database services using Docker Compose for reproducible local and production deployment.

VocabVault — Spaced Repetition Platform — Aug 2026 – Sept 2026

React 19, Node.js, Express, MongoDB Atlas | Smart vocabulary learning web application implementing Leitner-box spaced repetition.

- Developed a full-stack learning platform with React 19, Express 5, and MongoDB Atlas supporting gamified quiz and practice modes.
- Implemented the Leitner box spaced repetition algorithm to optimize review intervals based on user recall accuracy.
- Automated continuous deployment across Cloudflare Pages (frontend SPA) and Render (REST API service).
